

2-Arachidonoylglycerol

Cat. No.:	HY-W011051
CAS No.:	53847-30-6
Molecular Formula:	C ₂₃ H ₃₈ O ₄
Molecular Weight:	378.55
Target:	Cannabinoid Receptor; Endogenous Metabolite
Pathway:	GPCR/G Protein; Neuronal Signaling; Metabolic Enzyme/Protease
Storage:	Solution, -20°C, 2 years

BIOLOGICAL ACTIVITY

Description	2-Arachidonoylglycerol is a second endogenous cannabinoid ligand in the central nervous system.
IC₅₀ & Target	Human Endogenous Metabolite
In Vitro	2-Arachidonoylglycerol (2-AG) is a cannabinoid ligand isolated from intestinal tissue. 2-Arachidonoylglycerol activates neuronal cannabinoid receptors as a full agonist, and prevents the induction of long-term potentiation at CA3-CA1 synapses. 2-Arachidonoylglycerol binds to cannabinoid receptors and exerts several effects typical of cannabinoid drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
